

CSC 170 - Introduction to Computers and Their Applications

Information Literacy Lecture 3 – Information Resources

Information Resources

- The library remains our most important information resource, although the manner in which we get our information has changed.
- Any search for information should start with the University's web site.

Books

- ALICAT is the primary to start a search of the Adelphi University libraries when searching for books, videos, and other library materials, start with the Adelphi Libraries' local collection by using ALICAT.
- Some will provide only article citations, which may include a link to the full text of the article. But others may also include the autho's abstract that summarizes the article.

Databases

- Databases provide a useful research resource for college-level work.
- Databases are organized in a way that allows the contents to be retrieved by a search.
- Most databases are specific to one subject, but there are others that are multi-subject. Academic Search Complete, Omnifile full text and the Proquest Research Library Collection are examples of multisearch databases.

Selecting a Database

The screenshot shows a library website's navigation menu with tabs for OneSearch, Articles/Databases, Journal Titles, Guides/Tutorials, and Course Reserves. The 'Articles/Databases' tab is active. Below the navigation is a search area with the text 'Search databases, e.g. Academic Search Complete, to find articles:'. There is a text input field labeled 'What database are you looking for?' and a yellow 'Search Databases' button. Below this is an 'OR' section with a dropdown menu labeled 'Select a Subject' and a yellow 'Search' button. A link for 'Browse all Databases' is also visible. On the right side, there is a vertical sidebar with a 'TODAY' section containing 'Garden', 'Swirbul Labs', and '7:30 ar'. Below that is a 'View a' section with a 'View a' button. Further down is an 'I NEED' section with buttons for 'Find Sei', 'Find Sei', 'Find Sei', 'Find an', 'Reserve', 'Access', and 'Give Fe'. At the bottom of the screenshot is a banner for 'Swirbul Labs 100/101 Open Until 3:00 a.m.' with a progress indicator of four circles, the last one being filled.

1 THE CYNICAL PIRATE: HOW CYNICISM EFFECTS MUSIC PIRACY
Woolley, Darryl J. Academy of Information and Management Sciences Journal Vol. 13, Iss. 1, (2010): 31-43.
Music piracy has noted its similarities to software piracy. This paper tests piracy, which describes music piracy in the same fashion that it describes software piracy. The Theory of Reasoned Action hypothesizes that a behavior can be predicted by a person's attitude toward the behavior and their perceptions of what other people think (social norms). TRA is modified by adding a cynicism factor to test whether levels of cynicism are associated with the extent of piracy behavior. The model is tested using responses to a survey given to university students. As expected, the models for music and software piracy are similar. Attitude and social norms are associated with piracy behavior, but only social norms related to perceptions about peers. Perceptions of authority figure attitudes toward music piracy are not associated with music piracy behavior. Cynicism is associated only with attitude, and not with social norms. Attitude and social norms are also correlated with each other. Students are more accepting of music piracy than of software piracy. These findings may apply in practice and research. Abstract | Translate | Hide highlights

Music piracy has a huge detrimental effect on the music recording industry, lowering revenue and profits and potentially changing the structure of the industry. The little research that has been conducted on music piracy has noted its similarities to software piracy. This paper tests whether the Theory of Reasoned Action (TRA) (Ajzen & Fishbein, 1980), which previously has been found to describe software piracy, adequately describes music piracy in the same fashion that it describes software piracy. The Theory of Reasoned Action hypothesizes that a behavior can be predicted by a person's attitude toward the behavior and their perceptions of what other people think (social norms). TRA is modified by adding a cynicism factor to test whether levels of cynicism are associated with the extent of piracy behavior. The model is tested using responses to a survey given to university students. As expected, the models for music and software piracy are similar. Attitude and social norms are associated with piracy behavior, but only social norms related to perceptions about peers. Perceptions of authority figure attitudes toward music piracy are not associated with music piracy behavior. Cynicism is associated only with attitude, and not with social norms. Attitude and social norms are also correlated with each other. Students are more accepting of music piracy than of software piracy. These findings may apply in practice and research. Headnote
ABSTRACT

Music piracy has a huge detrimental effect on the music recording industry, lowering revenue and profits and potentially changing the structure of the industry. The little research that has been conducted on music piracy has noted its similarities to software piracy. This paper tests whether the Theory of Reasoned Action (TRA) (Ajzen & Fishbein, 1980), which previously has been found to describe software piracy, adequately describes music piracy in the same fashion that it describes software piracy. The Theory of Reasoned Action hypothesizes that a behavior can be predicted by a person's attitude toward the behavior and their perceptions of what other people think (social norms). TRA is modified by adding a cynicism factor to test whether levels of cynicism are associated with the extent of piracy behavior.

The Article in PDF

Some Databases Only Supply A...

- **Citation** – contains all the information that you need to find the published article, i.e., author, title of article, title of journal, volume and issue #, and page(s).
- **Abstract** – a summary (usually one paragraph) of the article's contents.

A Subject Database

- Subject databases allow the user to search for articles in a particular discipline.
- This avoids the problem of “information overload”

Scholarly vs. Popular Periodicals

Scholarly Journals

- Academic/scholarly in scope
- Written by faculty/scholars
- Research articles
- References and bibliography
- Scholarly language
- Written for researchers/students
- Articles are peer-reviewed

Popular Magazines

- News/general interest in scope
- Written by reporters/freelancers/anonymous
- Public interest articles
- Few bibliographic references
- Conversational language
- Written for the general public
- Articles reviewed by editorial staff

Google Search

- Google Scholar provides a way to search for scholarly publications and can sometimes provides links to where you can find them.
- You can search by author, title, or category.
