- Represents or rounds to zero

<sup>1</sup> A margin of error is a measure of an estimate's variability. The larger the margin of error is in relation to the size of the estimate, the less reliable the estimate. For further information on the source of the data and accuracy of the estimates, including standard errors, margins of error, and confidence intervals, go to <[http://www.census.gov/sipp/sourceac/S&A08\\_W1toW6\(S&A-13\).pdf](http://www.census.gov/sipp/sourceac/S&A08_W1toW6(S&A-13).pdf)>.

An '\*\*\*\*\*' in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

<sup>2</sup> Not part of the disability definition.

<sup>3</sup> While this report uses the term 'intellectual disability', the survey question asked if respondents had 'mental retardation'. Other definitions of intellectual disability may include types of conditions not captured in this measure.
