D6 Roll Cards (for when rolling dice is inconvenient or impractical)

To use: print on paper or heavy cardstock. Cut out the six cards below and place in a pile, face-down. Either choose a random number between 00-59, or if wearing a watch, note the seconds value of the current time. Flip over the top card. The tens digit of your number indicates a row; the ones digit of your number indicates a column. Use the value at the intersection as the random roll of a six-sided die. Then place the card you just used face-down at the bottom of the pile.

Happy Gaming!
